

# Tutorial 3 - DTs, SVMs, KNNs (oh my!)

Kevin Dick, PhDc Biomedical Engineering  
Carleton University

Friday 18<sup>th</sup> September, 2020

# Disclaimer: Recorded Tutorials will be Publicly Posted

**Goal:** to create a companion series of applied machine learning tutorials for the 100MLB text, these tutorials will be publicly posted as a YouTube playlist.

---

<sup>1</sup>I encourage unmuted/voice-based questions at any time, but know that this isn't explicitly privacy-preserving

# Disclaimer: Recorded Tutorials will be Publicly Posted

**Goal:** to create a companion series of applied machine learning tutorials for the 100MLB text, these tutorials will be publicly posted as a YouTube playlist.

## Privacy Preservation (easy):

- I will keep participant video off-screen
- I will address questions in the chat by **first name** only
- **You** should stay muted and ask questions in the chat<sup>1</sup>.

---

<sup>1</sup>I encourage unmuted/voice-based questions at any time, but know that this isn't explicitly privacy-preserving

# Disclaimer: Recorded Tutorials will be Publicly Posted

**Goal:** to create a companion series of applied machine learning tutorials for the 100MLB text, these tutorials will be publicly posted as a YouTube playlist.

## Privacy Preservation (easy):

- I will keep participant video off-screen
- I will address questions in the chat by **first name** only
- **You** should stay muted and ask questions in the chat<sup>1</sup>.

## Privacy Preservation (less easy):

If the above *hinders your ability to learn*  $\wedge$  *violates your privacy*, please let me/Dr. Green know ASAP and video will be post-processed accordingly.

---

<sup>1</sup>I encourage unmuted/voice-based questions at any time, but know that this isn't explicitly privacy-preserving

## 1. (NLP) Go Ahead, Try to Sneak Bad Words Past AI Filters—for Research

### Rethinking AI Benchmarking

Dynabench is a research platform for dynamic data collection and benchmarking. Static benchmarks have well-known issues: they saturate quickly, are susceptible to overfitting, contain exploitable annotator artifacts and have unclear or imperfect evaluation metrics.

This platform in essence is a scientific experiment: can we make faster progress if we collect data dynamically, with humans and models in the loop, rather than in the old-fashioned static way?

## Instance-Based Method 3-Nearest Neighbours

# Comparing “Classical” ML Algorithms

In this tutorial, we will build and compare *classical* learning algorithms and demonstrate where each are more or less useful.

**Key Takeaway: no one method is a *Silver Bullet*!**

When linear regression would have done the job, but someone just really wanted to be using deep learning.
